

FOR IMMEDIATE RELEASE

## Insight Water Technologies Announces Commercial Agreement with Rosenxt

*IWT to Bring Rosenxt's Linegy Water Line Integrity Portfolio to North America*

---

**Phoenix, AZ — July 7, 2026** — Insight Water Technologies (IWT), a Phoenix-based provider of high-resolution condition assessment solutions for pressurized water transmission mains, today announced a commercial agreement with Rosenxt USA to represent its Rosenxt Linegy portfolio across North America. The portfolio — a suite of inline inspection and asset integrity management solutions for water lines — will be available in the region for the first time.

Under the agreement, effective June 8, 2026, IWT has been appointed as Rosenxt USA Inc.'s independent sales representative for selected Rosenxt Linegy water line integrity offerings. Rosenxt may also act as IWT's preferred subcontractor for water line integrity products and services on selected projects, delivering those services exclusively through Rosenxt's proprietary technologies, proven methodologies, and technical expertise.

The collaboration pairs Rosenxt Linegy's inspection and asset integrity capabilities with IWT's industry knowledge and long-standing relationships, introducing the Rosenxt full portfolio to engineering firms, water and wastewater utilities asset owners. IWT will serve as the North American representative for Rosenxt Linegy.

Rosenxt is backed by decades of engineering and inspection experience. The company was launched in 2023 by Hermann Rosen, founder of the ROSEN Group, a pipeline inspection company that grew over four decades into a global leader spanning more than two-thirds of the world's oil and gas pipelines. Rosenxt's Linegy portfolio combines advanced inspection capabilities, integrity engineering, and data-driven assessment methods for pressurized water lines. The technologies are developed and validated through dedicated testing and operational experience before being deployed in the field.

Myron Shenkiryk, CEO of Insight Water Technologies, saw the Rosenxt operation firsthand before the collaboration was finalized. "What sets Rosenxt apart isn't just the sophistication of what they've built — it's the infrastructure behind how they build it," said Shenkiryk. "This is a company where R&D isn't a department; it's the entire culture. That's exactly the kind of partner we were looking for, and exactly what North American utilities deserve."

"This collaboration brings together Rosenxt's integrity and inspection expertise with IWT's deep understanding of the North American water and wastewater market. It enables us to help asset owners and operators better understand the complex challenges facing their critical infrastructure and address them with tailored solutions. By turning advanced inspection data into actionable insight, we support better-informed decisions about the condition, reliability, and long-term performance of water infrastructure," said Chris Yoxall, CEO Realization at Rosenxt. "IWT's well-established expertise and decades of relationships with municipalities and

engineering firms make them the right choice to introduce our capabilities to the North American market.”

North American utilities face growing pressure to address aging transmission main infrastructure, and demand for reliable inline inspection has never been greater. Through this collaboration, IWT and Rosenxt are bringing the full Rosenxt Linegy portfolio to the continent for the first time.

The collaboration is based on a commercial agreement between two independent companies. IWT and Rosenxt USA will each continue to operate as separate legal entities and remain responsible for their own operations. The agreement does not create a joint venture or merger.

### **About Insight Water Technologies**

Headquartered in Phoenix, Arizona, Insight Water Technologies founders have spent decades at the forefront of water infrastructure condition assessment, earning a strong reputation among municipalities and engineering firms for the quality and precision of their work. IWT's condition assessment portfolio covers both metallic and concrete water wastewater force mains giving infrastructure managers the data they need to make informed decisions about reliability, risk, and capital investment. The company is committed to continuous advancement — in the technologies it brings to market and in the operational capacity it builds to serve water systems across North America. ### **About Rosenxt**

Rosenxt USA Inc. is part of the Rosenxt Group, delivering Advanced Technological Services (ATS) that enhance the safety, reliability, and performance of critical infrastructure in harsh and complex environments. Serving the energy, water infrastructure, subsea, offshore, and industrial sectors, Rosenxt combines advanced sensing, autonomous robotics, physical AI, intelligent data analytics, and advanced materials with decades of engineering expertise and operational excellence to help customers reduce uncertainty, optimize performance, and prepare for tomorrow's challenges. As a privately owned company, Rosenxt takes a long-term perspective - investing ahead of market needs and focusing on sustainable customer value.

Through Rosenxt Linegy, the company provides advanced water line inspection and integrity solutions that help utilities and infrastructure owners better understand the condition, reliability, and risk profile of critical pipeline assets.
